

ANKITA S

BTECH CSE STUDENT @ PES UNIVERSITY

Bengaluru, Karnataka, INDIA | +91 9449186301 | ankitasatish0711@gmail.com

PROFILE SUMMARY

B.Tech Computer Science Engineering undergraduate at PES University with a strong interest in Artificial Intelligence, Machine Learning, Deep Learning, and emerging technologies. Active participant in hackathons, technical competitions, and research initiatives, including the CCBD-CDSAML Research Center SIG, with strong problem-solving, teamwork, communication, and adaptability skills.

EXPERIENCE

Summer Research Intern

CDSAML | Jun - Jul 2026

- Developed an anatomy-aware hand X-ray reconstruction pipeline using bone segmentation and synthetic defect generation.
- Implemented SAM/PedVision-based individual bone segmentation and created a supervised dataset of corrupted X-rays, defect masks, and ground-truth images.
- Trained a U-Net with ResNet-34 encoder to reconstruct missing bone regions, achieving anatomically consistent restoration of occluded structures.

EDUCATION

Bachelor of Technology - Computer Science Engineering

PES University - 2024 -2028

SKILLS

Technical Skills

C programming , C++, HTML5, CSS, Javascript,

Software Technologies and Tools

Git, GitHub, VS Code, Google Colab, MS Office Suite ,Flask, React

Soft Skills

Communication, Team Work , Creativity, Marketing

PROJECTS

1] PetMatch AI:-

RAG-based pet recommendation system that retrieves pet-related knowledge and matches it with user lifestyle, living conditions, allergies, budget, and availability to provide personalized, explainable pet recommendations and improve adoption compatibility.

2] SDN Traffic Monitoring:-

This project builds a Software Defined Networking (SDN) controller using Ryu that monitors network traffic inside a Mininet virtual network. It collects and displays how many packets and bytes are flowing through the network — every 5 seconds.

3] NeuroSense

Detects epileptic seizures from EEG signal data using a 1D Convolutional Neural Network (CNN). Classifies brain activity into seizure and non-seizure states — built to support patient monitoring and extendable to real-time alert systems and wearable healthcare devices.
